

Git History Cleanup Log (Corrected)

Git History Cleanup Process (Corrected)

Git History Cleanup Process (Corrected)

1. Installed `git filter-repo` using Homebrew:

```
brew install git-filter-repo
```

2. Removed the large file (`datacompr.csv`) from the repository history:

```
git filter-repo --path CEE5735-GP_regression/datacompr.csv --invert-paths
```

3. Force-pushed the cleaned history to the remote:

```
git push --force
```

This process successfully removed the large file from the entire Git history while preserving the rest of the repository.
